**DETAILED ACTION**

***Claim Rejections - 35 USC § 103***

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-3 is rejected under 35 U.S.C. 103(a) as being unpatentable over Tomimaru (11-13627) in view of Mizutani(JP2-27170)

Tomimaru disclose a motor body in fig.(1) comprising a output shaft(B) projecting from a front end of the motor body(11), a voltage-supplying terminal provided having elastic force with a grounding portion (23) disposed near a rear end of said motor body in a direction substantially orthogonal to the output shaft and a weight eccentrically secured to the output shaft(13). Tomimaru does not show the terminal having a first, second and third portion.

Mizutani teaches a motor in fig.(2) comprising a connecting terminal having a first portion(51d) extending substantially parallel to the output shaft, a second portion extending (51e) substantially parallel to the first portion from a front end of the first portion by way of a bent part and a third portion (51c) in a curved manner from a rear end of the second portion for the purpose of obtaining an electrical connection.

Therefore, it would have been obvious to one having ordinary skill in the art at the time the invention was made to modify the motor of Tomimaru with the teaching of the connecting terminal of Mizutani for the purpose of reducing manufacturing cost.
